IEE Proceedings

CIRCUITS, DEVICES AND SYSTEMS

The Institution of Electrical Engineers, Savoy Place, London WC2R 0BL, United Kingdom
Publishing Department: Michael Faraday House, Six Hills Way, Stevenage, Herts. SG1 2AY, United Kingdom

Volume 148 2001 UK ISSN 1350–2409

HONORARY EDITORS

Dr. P. Groeneveld (*Magma Design Automation*)
Prof. A. K. Ray (*Sheffield Hallam University*)

Pages in issues of *IEE Proc.-Circuits Devices Syst.*, 2001

Pages	Issue No.	Date
1–52	1	February
53–108	2	April
109–176	3	June
177–228	4	August
229–288	5	October
289–352	6	December

AMPLIFIERS

High-voltage smart power integrated circuits to drive piezoceramic actuators for microrobotic applications p343
Low voltage, low power, high performance current mirror for portable analogue and mixed mode applications p273
New CMOS 2 V low-power IF fully differential Rm-C bandpass amplifier for RF wireless receivers p318
Novel self-error-correction pulse width modulator for a class D hearing instrument amplifier p261
Voltage-mode MOSFET-C filters using operational transresistance amplifiers (OTRAs) with reduced parasitic capacitance effect p242

ANALOGUE ELECTRONICS

Low voltage, low power, high performance current mirror for portable analogue and mixed mode applications p273
Neural network-based L_1-norm optimisation approach for fault diagnosis of nonlinear circuits with tolerance p223
New CMOS 2 V low-power IF fully differential Rm-C bandpass amplifier for RF wireless receivers p318
Robust design of low power CMOS analogue integrated circuits p197
Voltage-mode MOSFET-C filters using operational transresistance amplifiers (OTRAs) with reduced parasitic capacitance effect p242
Waveform relaxation approach to PWL simulation of analogue and mixed A/D networks at the functional level p145

AUDIO EQUIPMENT

Moving magnet loudspeaker system with electronic compensation p211

BIOMEDICAL ENGINEERING

Novel self-error-correction pulse width modulator for a class D hearing instrument amplifier p261
PI force control of a microgripper for assembling biomedical microdevices p348

BROADCASTING

New CMOS 2 V low-power IF fully differential Rm-C bandpass amplifier for RF wireless receivers p318

CALIBRATION

Improved neuron MOS-transistor structures for integrated neural network circuits p25

CIRCUIT THEORY AND DESIGN

Analysis and implementation of a delay-compensated deadbeat current controller for solar inverters p279
Delay approximation for synchronous filter topologies p109
Fast and simple method to find all equilibrium points of dynamic 1-D arrays p328
Heuristic synthesis of low coefficient sensitivity second-order digital filters using genetic programming p121
Low-voltage low-power CMOS full adder p19
Neural network-based L_1-norm optimisation approach for fault diagnosis of nonlinear circuits with tolerance p223
New CMOS 2 V low-power IF fully differential Rm-C bandpass amplifier for RF wireless receivers p318
New path balancing algorithm for glitch power reduction p151
Numerical analysis of the steady-state response of nonlinear circuits using the trigonometric collocation method p45
Optimum approximation functions for lumped element quadrature hybrids p5
Optimum design of 1.4 kV non-punch-through trench IGBTs: the next generation of high-power switching devices p71
Steady-state prediction in nonlinear circuits with periodic inputs by wavelet transform p296
Transfer functions of optimum lumped element quadrature hybrids p135
Waveform relaxation approach to PWL simulation of analogue and mixed A/D networks at the functional level p145

CMOS INTEGRATED CIRCUITS

Adiabatic carry look-ahead adder with efficient power clock generator p229
Comments on "CMOS differential difference current conveyors and their applications" p335
Fully differential switched-current memory cell with low charge-injection errors p157
Impact of 0.25 μm dual gate oxide thickness CMOS process on flicker noise performance of multifingered deep-submicron MOS devices p312
Improved neuron MOS-transistor structures for integrated neural network circuits p25
Low-voltage low-power CMOS full adder p19
Low voltage, low power, high performance current mirror for portable analogue and mixed mode applications p273
New CMOS 2 V low-power IF fully differential Rm-C bandpass amplifier for RF wireless receivers p318
New path balancing algorithm for glitch power reduction p151
Novel self-error-correction pulse width modulator for a class D hearing instrument amplifier p261
Pipeline direct digital frequency synthesiser using decomposition method p141
Robust design of low power CMOS analogue integrated circuits p197
Simultaneous switching noise analysis and low-bounce buffer design p303

CODES AND DECODING

High-performance phased binary coding p1

COMPUTATIONAL COMPLEXITY

Efficient algorithm to calculate Reed-Muller expansions over GF(4) p289

COMPUTERISED INSTRUMENTATION

SRAM transparent testing methodology using dynamic power supply current p217

CONTROL SYSTEM ANALYSIS

Analysis and implementation of a delay-compensated deadbeat current controller for solar inverters p279

CONTROL SYSTEM STABILITY

Stability and dynamic boundary condition decoupling analysis for a class of 2-D discrete linear systems p126

DC MACHINES

Development of an electromagnetic micro-generator p337

DIELECTRIC MATERIALS AND DEVICES

High-voltage smart power integrated circuits to drive piezoceramic actuators for microrobotic applications p343

DIGITAL ARITHMETIC

Adiabatic carry look-ahead adder with efficient power clock generator p229
Novel radix-2^k square root module p190
Novel serial-parallel multipliers p183

DIGITAL ELECTRONICS

Fully differential switched-current memory cell with low charge-injection errors p157
Pipeline direct digital frequency synthesiser using decomposition method p141
SRAM transparent testing methodology using dynamic power supply current p217
Waveform relaxation approach to PWL simulation of analogue and mixed A/D networks at the functional level p145

DIGITAL FILTERS

Heuristic synthesis of low coefficient sensitivity second-order digital filters using genetic programming p121

DISCRETE SYSTEMS

Stability and dynamic boundary condition decoupling analysis for a class of 2-D discrete linear systems p126

DISTRIBUTED PARAMETER SYSTEMS

Stability and dynamic boundary condition decoupling analysis for a class of 2-D discrete linear systems p126

ELECTRIC MACHINES

Development of an electromagnetic micro-generator p337

ELECTROMAGNETIC COMPATIBILITY

Theoretical study of the limitation of frequency excursion in hysteresis-mode boost-converter input stages in high power-factor AC-fed power supplies p205

ELECTROMAGNETIC INTERFERENCE

Theoretical study of the limitation of frequency excursion in hysteresis-mode boost-converter input stages in high power-factor AC-fed power supplies p205

ELECTRIC VARIABLES CONTROL

Analysis and implementation of a delay-compensated deadbeat current controller for solar inverters p279

ELECTRONIC CIRCUITS

PI force control of a microgripper for assembling biomedical microdevices p348

ENGINEERING COMPUTING

Analysis and implementation of a delay-compensated deadbeat current controller for solar inverters p279
Fast and simple method to find all equilibrium points of dynamic 1-D arrays p328
Heuristic synthesis of low coefficient sensitivity second-order digital filters using genetic programming p121
Low-voltage low-power CMOS full adder p19
Neural network-based L_1-norm optimisation approach for fault diagnosis of nonlinear circuits with tolerance p223
New path balancing algorithm for glitch power reduction p151
Optimum design of 1.4 kV non-punch-through trench IGBTs: the next generation of high-power switching devices p71
Waveform relaxation approach to PWL simulation of analogue and mixed A/D networks at the functional level p145

FILTERS AND FILTERING

Application of the genetic algorithm and simulated annealing to LC filter tuning p177
Comments on "CMOS differential difference current conveyors and their applications" p335
Delay approximation for synchronous filter topologies p109
Derivation of low-sensitivity current-mode CCII-based filters p115
Optimum approximation functions for lumped element quadrature hybrids p5
Voltage-mode MOSFET-C filters using operational transresistance amplifiers (OTRAs) with reduced parasitic capacitance effect p242

INSULATED GATE FIELD EFFECT TRANSISTORS

Design of single-gated multiple-mode power semiconductor devices p64
Electromechanical evaluation of a bondless pressure contact IGBT p89
Finite element modelling of thermal fatigue effects in IGBT modules p95
Injection-enhancement effect in a novel, trench-planar insulated gate bipolar transistor p79
Optimum design of 1.4 kV non-punch-through trench IGBTs: the next generation of high-power switching devices p71
Small signal model and efficient parameter extraction technique for deep submicron MOSFETs for RF applications p35

INTEGRATED CIRCUITS

Analysis and improvement of the noise immunity in a single-chip super-regenerative transceiver p250
High-voltage smart power integrated circuits to drive piezoceramic actuators for microrobotic applications p343
Improved neuron MOS-transistor structures for integrated neural network circuits p25
Low-voltage low-power CMOS full adder p19
New path balancing algorithm for glitch power reduction p151
Robust design of low power CMOS analogue integrated circuits p197
Simultaneous switching noise analysis and low-bounce buffer design p303
SRAM transparent testing methodology using dynamic power supply current p217

LOGIC CIRCUITS

Adiabatic carry look-ahead adder with efficient power clock generator p229
Low-voltage low-power CMOS full adder p19
New path balancing algorithm for glitch power reduction p151
Novel serial-parallel multipliers p183
Self-timed multiplier based on canonical signed-digit recoding p235

LOGIC DESIGN

Adiabatic carry look-ahead adder with efficient power clock generator p229
Heuristic synthesis of low coefficient sensitivity second-order digital filters using genetic programming p121
Low-voltage low-power CMOS full adder p19
New path balancing algorithm for glitch power reduction p151
Simultaneous switching noise analysis and low-bounce buffer design p303
SRAM transparent testing methodology using dynamic power supply current p217

MATHEMATICAL TECHNIQUES

Efficient algorithm to calculate Reed-Muller expansions over GF(4) p289
Steady-state prediction in nonlinear circuits with periodic inputs by wavelet transform p296

MEASUREMENT OF SPECIFIC VARIABLES

PI force control of a microgripper for assembling biomedical microdevices p348

MEASUREMENT SCIENCE

Improved neuron MOS-transistor structures for integrated neural network circuits p25

MICROMECHANICAL DEVICE TECHNOLOGY

High-voltage smart power integrated circuits to drive piezoceramic actuators for microrobotic applications p343
PI force control of a microgripper for assembling biomedical microdevices p348

MICROPROCESSORS

Design of digital correlation systems for low-intensity precision photon spectroscopic measurements p267

MODULATORS AND DEMODULATORS

Novel PLL-based frequency synthesiser without using the frequency divider p255
Novel self-error-correction pulse width modulator for a class D hearing instrument amplifier p261

NEURAL NETWORKS

Improved neuron MOS-transistor structures for integrated neural network circuits p25
Neural network-based L_1-norm optimisation approach for fault diagnosis of nonlinear circuits with tolerance p223

NONELECTRIC VARIABLES CONTROL

PI force control of a microgripper for assembling biomedical microdevices p348

NUMERICAL ANALYSIS

Efficient algorithm to calculate Reed-Muller expansions over GF(4) p289
Electrothermal model of GaAs FET devices for fast PC implementation p40
Finite element modelling of thermal fatigue effects in IGBT modules p95
Innovative low-cost power module p85
Optimum approximation functions for lumped element quadrature hybrids p5
Steady-state prediction in nonlinear circuits with periodic inputs by wavelet transform p296
Waveform relaxation approach to PWL simulation of analogue and mixed A/D networks at the functional level p145

OPTICAL TECHNIQUES

Design of digital correlation systems for low-intensity precision photon spectroscopic measurements p267

OPTIMISATION

Application of the genetic algorithm and simulated annealing to LC filter tuning p177
Heuristic synthesis of low coefficient sensitivity second-order digital filters using genetic programming p121
Neural network-based L_1-norm optimisation approach for fault diagnosis of nonlinear circuits with tolerance p223
New path balancing algorithm for glitch power reduction p151

OPTOELECTRONICS

Modelling of self-protected light-triggered thyristors p55

PARALLEL PROCESSING

Novel serial-parallel multipliers p183

POWER CONVERTERS

Analysis and implementation of a delay-compensated deadbeat current controller for solar inverters p279

POWER ELECTRONICS

Design of single-gated multiple-mode power semiconductor devices p64
Electromechanical evaluation of a bondless pressure contact IGBT p89
Finite element modelling of thermal fatigue effects in IGBT modules p95
High-voltage smart power integrated circuits to drive piezoceramic actuators for microrobotic applications p343
Injection-enhancement effect in a novel, trench-planar insulated gate bipolar transistor p79
Optimum design of 1.4 kV non-punch-through trench IGBTs: the next generation of high-power switching devices p71
Recent progress and current issues in SiC semiconductor devices for power applications p101
Theoretical study of the limitation of frequency excursion in hysteresis-mode boost-converter input stages in high power-factor AC-fed power supplies p205

POWER ENGINEERING COMPUTING

Analysis and implementation of a delay-compensated deadbeat current controller for solar inverters p279

POWER SYSTEM CONTROL

Analysis and implementation of a delay-compensated deadbeat current controller for solar inverters p279

POWER SYSTEM PROTECTION

Electrical characterisations of new microgap surge absorber fabricated by using conventional semiconductor technology p171

POWER SYSTEMS AND PLANTS

Analysis and implementation of a delay-compensated deadbeat current controller for solar inverters p279

PRODUCTION ENGINEERING

Electromechanical evaluation of a bondless pressure contact IGBT p89
Innovative low-cost power module p85
Recent progress and current issues in SiC semiconductor devices for power applications p101

RADIO SYSTEMS

Analysis and improvement of the noise immunity in a single-chip super-regenerative transceiver p250
New CMOS 2 V low-power IF fully differential Rm-C bandpass amplifier for RF wireless receivers p318

RELIABILITY

Electromechanical evaluation of a bondless pressure contact IGBT p89
Finite element modelling of thermal fatigue effects in IGBT modules p95
Novel lateral merged double Schottky (LMDS) rectifier: proposal and design p165

ROBOTICS

High-voltage smart power integrated circuits to drive piezoceramic actuators for microrobotic applications p343
PI force control of a microgripper for assembling biomedical microdevices p348

SEMICONDUCTOR DEVICE MODELLING

Electrothermal model of GaAs FET devices for fast PC implementation p40
Finite element modelling of thermal fatigue effects in IGBT modules p95
Injection-enhancement effect in a novel, trench-planar insulated gate bipolar transistor p79
Modelling of self-protected light-triggered thyristors p55
Novel lateral merged double Schottky (LMDS) rectifier: proposal and design p165
Optimum design of 1.4 kV non-punch-through trench IGBTs: the next generation of high-power switching devices p71
Small signal model and efficient parameter extraction technique for deep submicron MOSFETs for RF applications p35

SEMICONDUCTOR DEVICES

Clustered insulated gate bipolar transistor: a new power semiconductor device p75
Design of single-gated multiple-mode power semiconductor devices p64
Electromechanical evaluation of a bondless pressure contact IGBT p89
Electrothermal model of GaAs FET devices for fast PC implementation p40
Finite element modelling of thermal fatigue effects in IGBT modules p95
Injection-enhancement effect in a novel, trench-planar insulated gate bipolar transistor p79
Novel lateral merged double Schottky (LMDS) rectifier: proposal and design p165
Optimum design of 1.4 kV non-punch-through trench IGBTs: the next generation of high-power switching devices p71

SEMICONDUCTOR INTERFACES

Impact of 0.25 μm dual gate oxide thickness CMOS process on flicker noise performance of multifingered deep-submicron MOS devices p312

SEMICONDUCTOR TECHNOLOGY

Electrical characterisations of new microgap surge absorber fabricated by using conventional semiconductor technology p171
Novel lateral merged double Schottky (LMDS) rectifier: proposal and design p165
Optimum design of 1.4 kV non-punch-through trench IGBTs: the next generation of high-power switching devices p71
Recent progress and current issues in SiC semiconductor devices for power applications p101

SENSORS AND ACTUATORS

High-voltage smart power integrated circuits to drive piezoceramic actuators for microrobotic applications p343
PI force control of a microgripper for assembling biomedical microdevices p348

SIGNAL GENERATORS

Novel PLL-based frequency synthesiser without using the frequency divider p255
Pipeline direct digital frequency synthesiser using decomposition method p141

SIGNAL PROCESSING

Spectrum of a nonlinearly quantised equal-amplitude dual-tone signal p11

SWITCHING SYSTEMS

Efficient ABR service engine for ATM networks p323

SWITCHING THEORY

Efficient ABR service engine for ATM networks p323
